

Forensic Services

Environmental Scientifics Group's Laboratories and Analytical Division is a well established provider of Forensic Science services drawing on years of experience and knowledge as well as its UKAS accredited analytical methods.

ESG's Forensic Services provide an extensive range of services and consultancy and can examine evidence in criminal and civil court cases, providing court ready reports and statements, and where needed, the services of trained court reporting officers. Data integrity is key to everything we do and the principles of forensic examination and chain of custody are applied rigorously to all the work in this section. Our independent and objective scientists offer customers the assurance that they are getting uncompromised accurate results when they need them.

Services include:

-  Drugs analysis
-  Scene of Crime evidence
-  Drug and Alcohol screening in the workplace
-  Fire and arson investigation

Forensic Services

ESG's Forensic Science services team are highly qualified and experienced, utilising the latest techniques to provide an extensive range of Forensic Science services and consultancy.

Operating from a state-of-the-art Home Office licensed laboratory that is fully equipped to conduct UKAS accredited analysis of solid drugs and urine samples, our highly skilled scientists have proven management experience to protect the chain of custody.

Protecting the Chain of Custody

The ESG premises are protected by a high level of security to comply with the requirements of Home Office licenses issued for the storage, handling and analysis of controlled drug substances. The Forensics Science team operate a proven management system with established protocols to track the ownership and description of all submissions received for examination and personal liaison takes place between the case officer and forensic scientist to secure mutual confidence.

ESG's Forensic Science team provide excellent delivery times for all Forensic Services. This includes a 'Fast-track' facility for very urgent casework including the analysis of test purchases of suspected drugs.

Drug Analysis

ESG Forensic Science offer a complete range of drug analysis including:

- Identification and quantification of solid drugs
