

Nuclear

Environmental Scientifics Group's Radiochemical Laboratory within the Laboratories and Analytical Services Division offers a broad range of radiochemical testing, providing customers with invaluable support.

Working with private, public and highly regulated organisations our experienced and skilled team monitor, test and analyse for radioactivity in the nuclear sector and across a range of other markets. Food, water, nuclear and power generation sites and employees in the nuclear industries are monitored and tested by scientists based at our Harwell laboratory.

Services include:

-  Radiochemical analysis
-  HSE Approved bioassay service
-  Decommissioning characterisation and waste acceptance criteria testing
-  Nuclear fingerprinting
-  Contaminated land analysis
-  Analysis of drinking water, crops and food
-  Monitoring, testing and analysis of effluents and groundwaters

Nuclear

The ESG Laboratories and Analytical Division offers customers the assurance that they are working with a well established and experienced provider that can test both non radioactive and radioactive samples in the same facility.

ESG's highly respected specialist radiochemical testing facility at Harwell offers safe, controlled and high quality testing of radioactive samples. Our services include radiochemical testing, bio assay analysis and the provision of analytical laboratory support to decommissioning projects.

Within the nuclear industry ESG are called upon to ensure that major contractors decommission plant and dispose of waste materials in a safe manner. In the environmental sector we measure radiation levels in water, soil and vegetation in addition to screening foodstuffs for radioactivity levels. The majority of the laboratory procedures undertaken are accredited by UKAS to ISO17025.

Additionally, ESG are one of a small number of HSE approved providers of bioassay services as part of a Dosimetry Service to monitor the safety of radiation workers within the UK nuclear industry.

The Laboratories and Analytical Division is a leading provider of analytical services within the UK and provides technical expertise, high quality data, excellent turnaround times and unrivalled customer service.
